

2-Keylogger

Hector V.

16.9.2026

#Instalacion

**Figure 1:** instalacion**Uso**

Usamos la opcion -h para ver como usar el comando

```
> logkeys -h
logkeys: invalid option -- 'h'
Usage: logkeys [OPTION]...
Log depressed keyboard keys.

-s, --start                start logging keypresses
-m, --keymap=FILE          use keymap FILE
-o, --output=FILE          log output to FILE [/var/log/logkeys.log] or standard output '-'
-u, --us-keymap            use en_US keymap instead of configured default
-k, --kill                 kill running logkeys process
-d, --device=FILE          input event device [eventX from /dev/input/]
-?, --help                print this help screen
--export-keymap=FILE       export configured keymap to FILE and exit
--no-func-keys             log only character keys
--no-timestamps            don't prepend timestamps to log file lines
--timestamp-every          log timestamp on every keystroke
--post-http=URL            POST log to URL as multipart/form-data file
--post-size=SIZE           post log file when size equals SIZE [500k]
--no-daemon                run in foreground

Examples: logkeys -s -m mylang.map -o ~/.secret-keys.log
          logkeys -s -d event6
          logkeys -k

logkeys version: 0.1.1b-svn
logkeys homepage: <https://github.com/kernc/logkeys/>
```

Figure 2: help

Empezamos a keyloggear

```
sudo logkeys -s -m Descargas/es_ES.map
```

Figure 3: command

Escribimos una frase de prueba

```
~
> Hi mi nombre es Hector, mi no speko english
```

Figure 4: test

Y vemos que lo hemos logeado

```
Logging started ...  
2026-09-16 12:40:40+0200 > <CpsLk>H<CpsLk>i mi nombre es <CpsLk>H<CpsLk>ector <BckSp>, mi no  
speko english<Up><Up>  
2026-09-16 12:41:01+0200 > <Enter>↵
```
